VIRTUAL FISH TANK

UX/UI DESIGN | Product Design

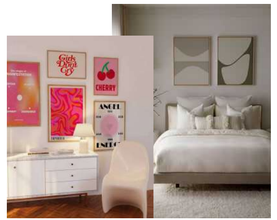
I found it difficult for people to start organizing their belongings, so I designed a virtual fish tank that visualizes space crowding to increase people's motivation to clean their rooms.

我发现人们很难开始整理自己的物品，因此我设计了一个虚拟鱼缸，通过可视化空间拥挤程度来提升人们整理房间的积极性。

INSPIRATION

I found that my room was always unknowingly filled with various miscellaneous items, causing it to become dirty and messy. But I don't know how to organize the room.

Nowadays, many media outlets are promoting the concept of Danshari, but I don't know how to apply it, and I have found that most people accurately use the method of separation their rooms. I hope there are some ways to help people improve this phenomenon



BACKGROUND

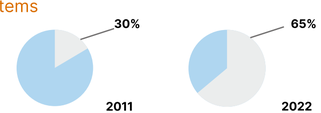
The concept of Danshari

Danshari, iproposed by Japanese writer Hideki Yamashita, refers to an attitude towards life that means cutting off and abandoning everything that is unnecessary,inappropriate, and outdated things, and cutting off attachment to them. Only after "Danshari" can one live a simple and refreshing life.

Why we need to Danshari

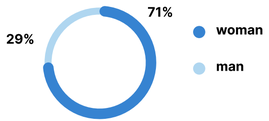
1. An increase in shopping desire

2. More people are starting to hoard items

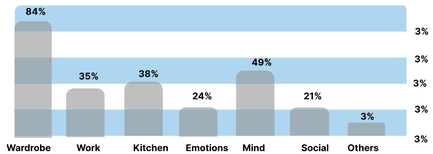


3. More diverse types of items

User characteristics

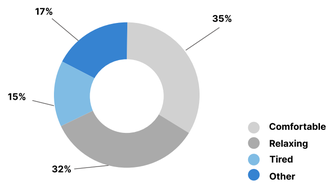


What areas do people believe need to be separated



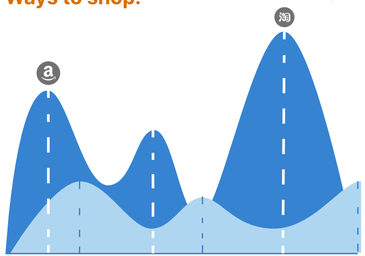
- Most people think their closets are the ones that need to be cut out the most.
- Many people also think that work and kitchens need cleaning up.

Mode feedback



Most people are in a better mood after cleaning up their rooms.

Ways to shop.



There are more and more ways to shop.

Summary

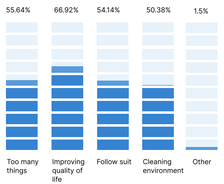
- Most people agree that there are more and more things in the house these days and it is difficult to organize them.
- Most women pay more attention to the cleanliness of their surroundings.
- Most people wish there was something they could do to help them get started.

QUESTIONNAIRE

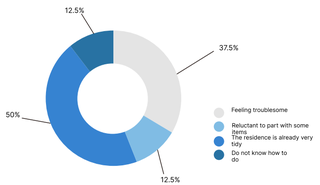
This survey questionnaire was published online and a total of 157 valid responses were collected. Among them, 74 were males and 83 were females. The following are the key data.

Have you ever tried Danshari?

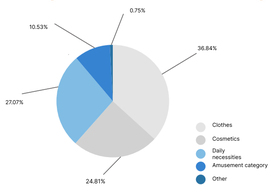
The reason for attempting to Danshari.



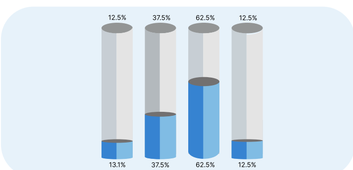
Why not use



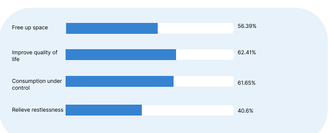
The things people most often give up



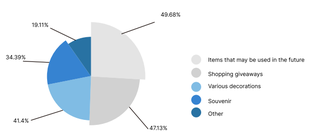
Hope to break away from the place.



The positive impact of detachment.



The proportion of items hoarded.



- Most people try to break up in order to improve their quality of life.
- People often discard clothes and daily necessities.
- Most people don't know how to do it without trying to break up.
- People often hoard things and shopping gifts for future use.

INTERVIEWS

Motivation

- A friend is coming to play at home.

Mood changes Irritability → Pride → Comfortable

Method

- Throw it into the trash can.
- Give it to those in need.

Pain point

Troublesome | Lazy

Requirement

Recycle | Reminder | Motivation

7

Accountant

Motivation

- I can't find my things.

Mood changes Fret → Tired → Comfortable

Method

- Classification and induction
- Give it to those in need.

Pain point

Lazy | Ignore

Requirement

Find the item | Reminder | Clean up

Motivation

- Clean up, replace furniture.

Mood changes No choice → Patient → Proud

Method

- Throw it into the trash can.
- Give it to those in need.

Pain point

Ignore | Lazy

Requirement

Help clean up | Pack it up | Recycle

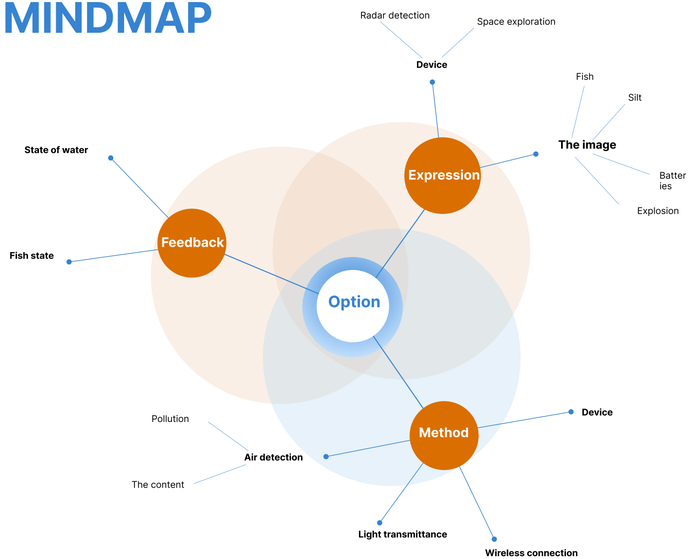
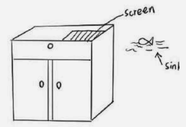
MINDMAP



SCHEME

Plan A



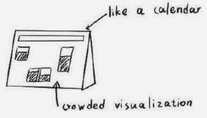
Specific scheme

Turning a screen on the furniture can detect the internal use space, while showing the crowding of the internal space in the form of small fish sinking into the silt.

Interactuve mode

Spatial visualization | Game | Intelligent furniture

Plan B



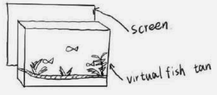
Specific scheme

Placed on the table like a calendar, you can see the structural space of various furniture and record information to help develop habits.

Interactuve mode

Spatial visualization | Warn | Records

Plan C



Specific scheme

The virtual electronic fish tank can reflect the crowded internal space through the state of small fish and silt inside.

Interactuve mode

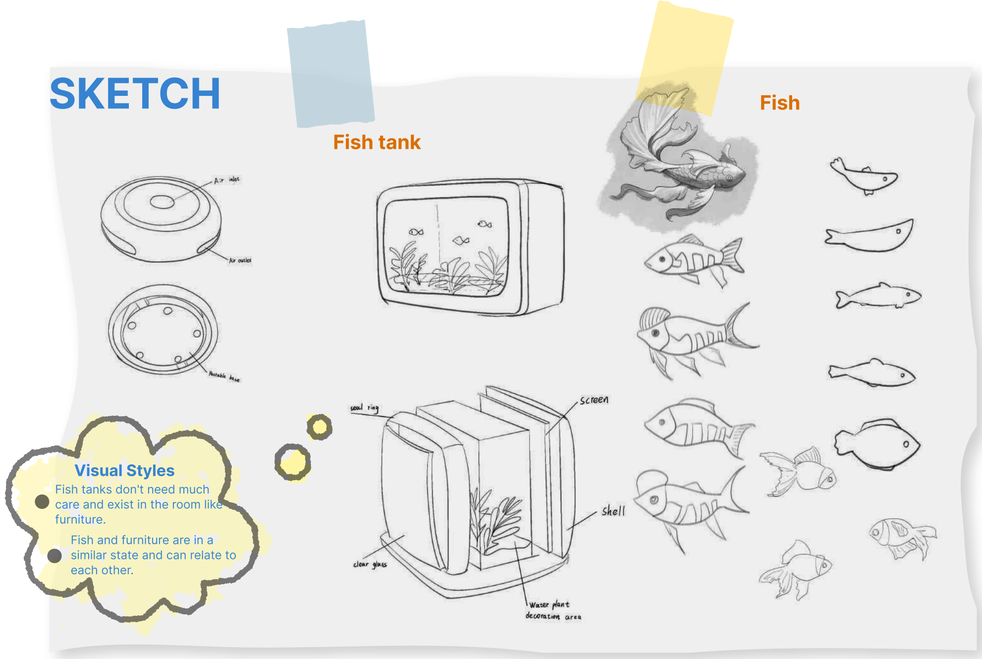
Spatial visualization | Interestingness | Warn

Plan B is too simple, and existing apps can achieve these goals.

Plan A is too expensive and difficult to alert the user.

Plan C is more interesting and can achieve the purpose of reminder, so hope to continue the research on the basis of this scheme.

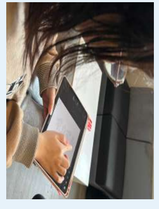
SKETCH

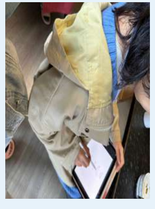


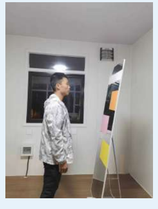
Visual Styles

- Fish tanks don't need much care and exist in the room like furniture.
- Fish and furniture are in a similar state and can relate to each other.

USER TESTING







- Through user testing, I found that people are more sensitive to simple shapes with distinct colors.

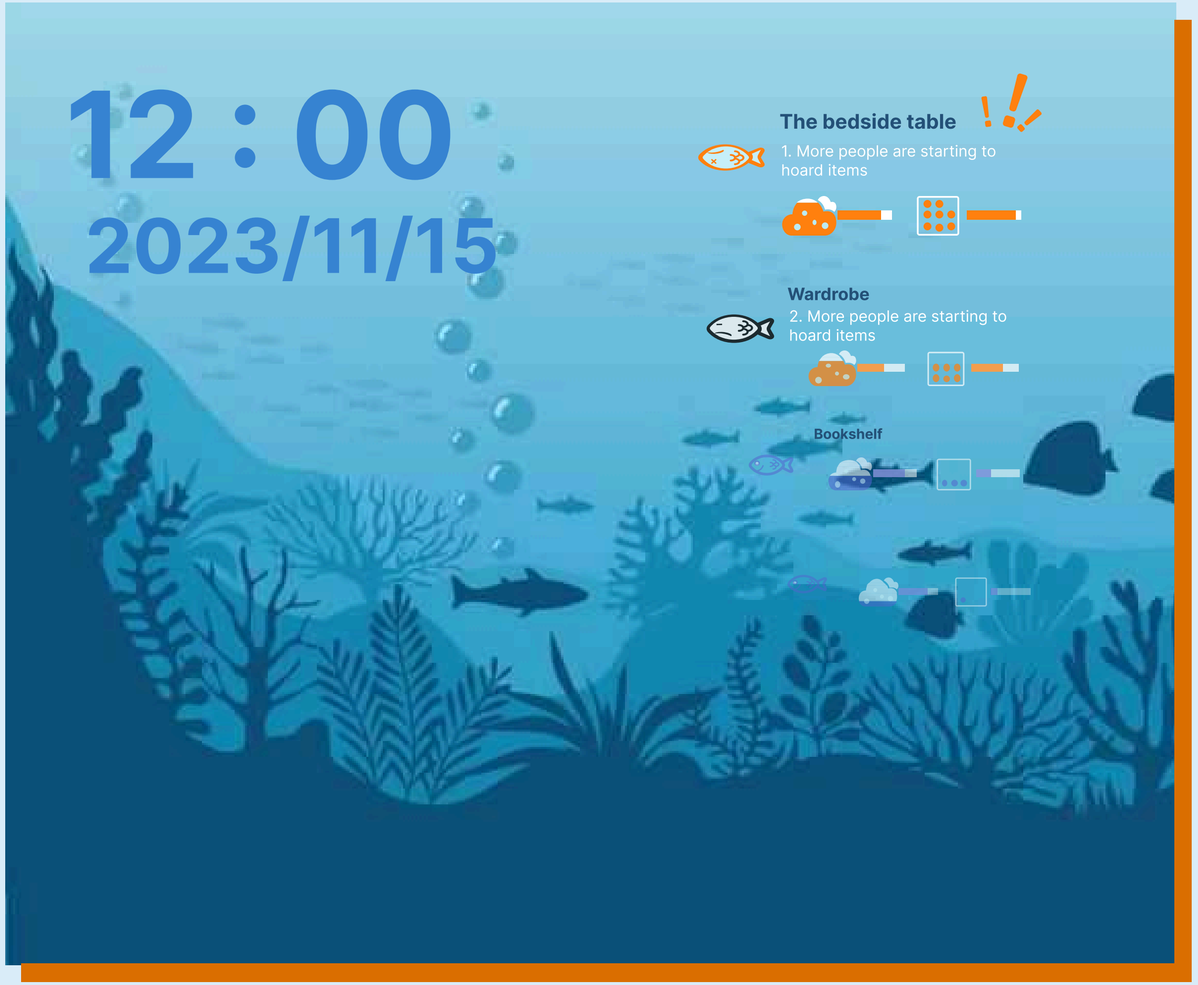
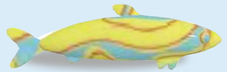
HIGH FIDELITY



MODEL

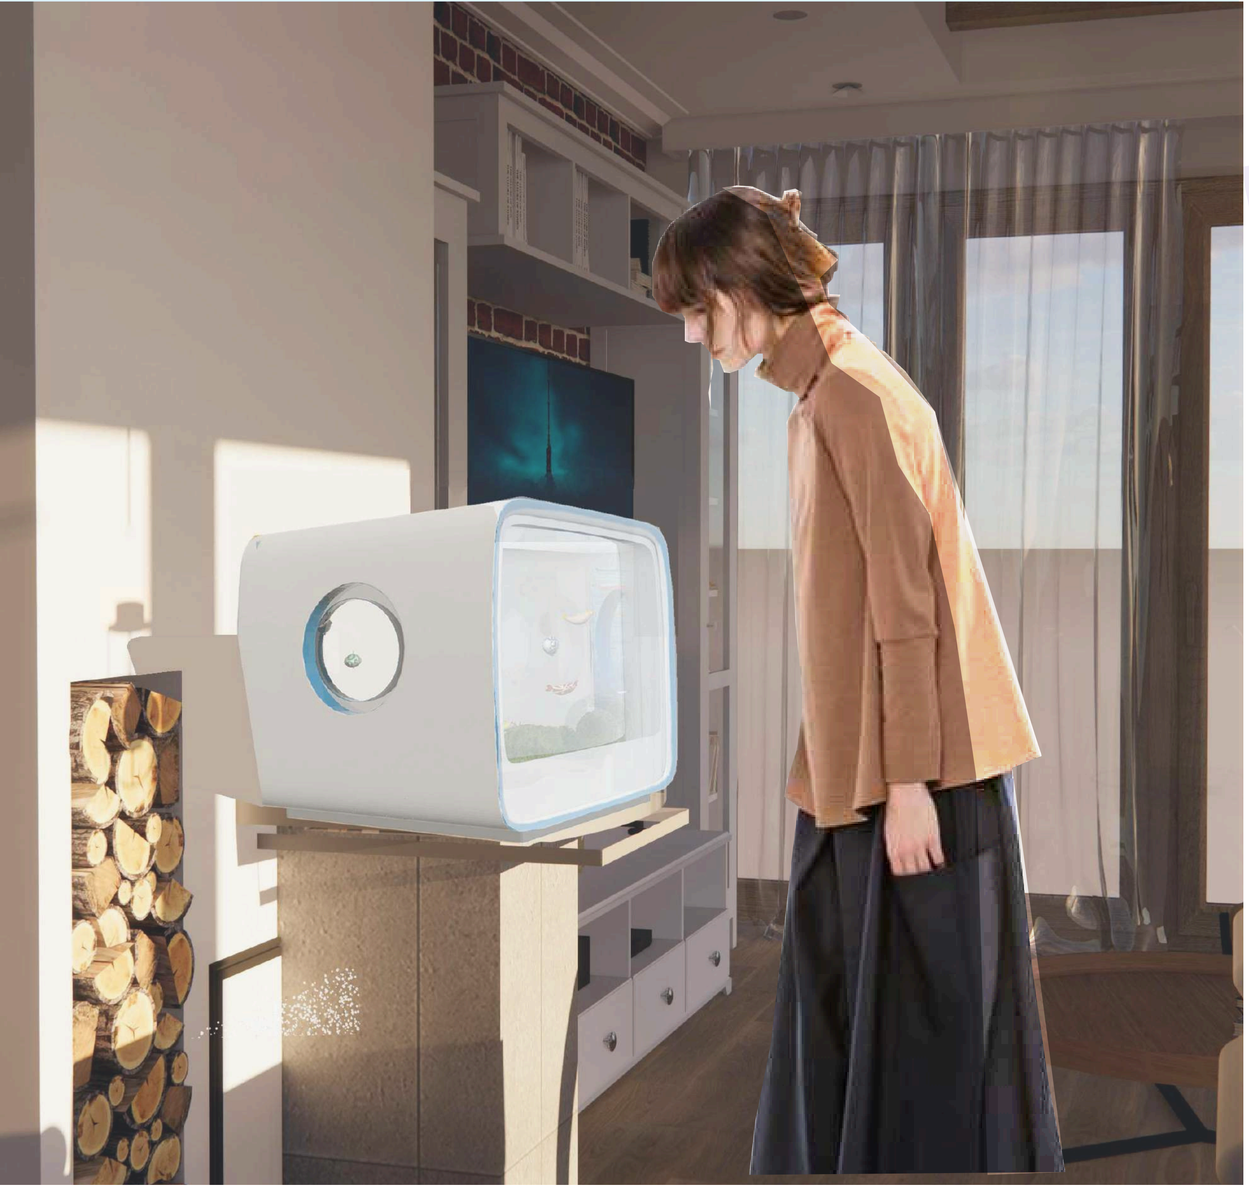
- The more crowded, the longer the furniture color display that is not opened will be more prominent.



- When furniture is very crowded and has not been cleaned for a long time.

- When it's crowded.

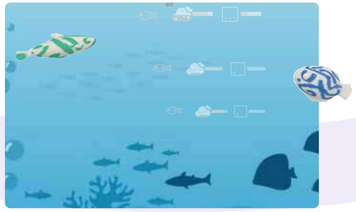
- When the interior is spacious.



STORYBOARD

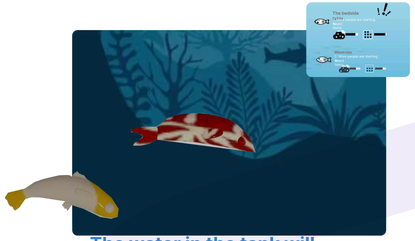
A man placed an air detector in a cabinet

The fish tank detects the environment inside the cabinet and produces changes

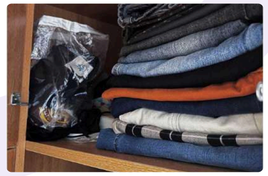


The more detectors you put in, the more fish you see in the tank

Fish tank 3d model



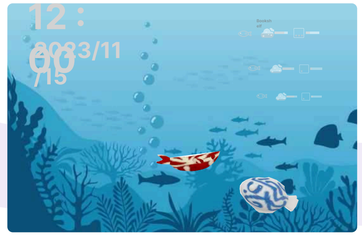
The water in the tank will become cloudy and the fish will become weak



When the fish tank detects that the internal space is full but still wants to place something.

Air purifier

When it detects people starting to tidy up space



The water is thinned out again, and the fish are sparse and active.
